Kibion has been acquired by a team of Swedish private investors.

Dear Partner!

We are very happy to announce that Kibion has been sold to a team with a solid background as owners and business leaders in the fields of diagnostics and treatment of gastroenterological diseases.

The new owners want to further strengthen Kibion's commercial capabilities through investments on key markets by a new strategic commercial plan. Through this investment Kibion will be able to strengthen its operations and continue to grow years to come.

Kibion will keep the same premises and address and no major changes will be made.

This is a great opportunity for Kibion to further develop the business and strengthen its leading position within diagnosis of *Helicobacter pylori* infection.

The new owners of Kibion are; *Håkan Björklund*, experience from Astra, Nycomed, Coloplast, Lundbeck, Atos Medical, *Torbjörn Koivisto*, experience from Moberg Pharma, *Magnus Lundberg*, experience from Pharmacia, Chiron, Phadia, Onyx Pharmaceutical, ConvaTec, Atos Medical and *Anders Lundmark*, experience from Phadia, Antrad Medical, Bioservo Technologies, who also will be acting as Chairman.

I will personally remain as CEO of Kibion AB, as well as invest into the company and become one of the owners.

Wish you all the best,

Petter Bäckgren

CEO of Kibion AB
